MULTIMEDIA UNIVERSITY

FINAL EXAMINATION

TRIMESTER 2, 2018/2019

BFN2094 – CORPORATE RISK MANAGEMENT

(All sections / Groups)

01th MARCH 2019
9.00 a.m – 11.00 a.m
(2 Hours)

INSTRUCTIONS TO STUDENTS

1. This question paper consists of SIX (6) printed pages with four (4) questions and financial tables only.
2. Attempt **ALL** questions.
3. Please write all your answer in the **Answer Booklet** provided.
4. Marks are shown at the end of each question.

There are FOUR (4) questions in this section. Answer ALL questions.

Question 1 (25 Marks)

- (a) Enak Enterprise is a restaurant which serve authentic Malay cuisine. Enak is concerned about the risk of employees cutting themselves on the job. Assuming that Enak has no plans in expanding its operation, which of the major risk management methods are likely to be most important to Enak? Which will not be appropriate for Enak? Explain.

(6 marks)

- (b) What is the difference between *loss financing* and *internal risk reduction* method?

(4 marks)

- (c) Andrew and Ahmad enter into a pooling arrangement for accidental losses. Assume that their losses are independent of each other and have the following distribution:

Possible outcomes (x_i)	Probability (p_i)
RM 0	0.945
RM 500	0.05
RM 1,000	0.0045
RM 5,000	0.0005

- i. Calculate the expected loss *before* risk pooling.

(5 marks)

- ii. What happens to the *expected loss* and *standard deviation* of the distribution of losses to each individual subsequent to the pooling arrangement? Briefly explain.

(4 marks)

- (d) Suppose that each participant in a pooling arrangement has potential losses ranging from RM0 to RM4,000 and that each participant's expected loss is RM1,000. **In one graph, sketch** the probability distribution of average losses if the losses across participants are independent and if:

- there is 1 participant (i.e., no pooling)
- there are 100 participants
- there are 1,000 participants

(6 marks)

Continued...

Question 2 (25 Marks)

- (a) Pintar Company owns real estate valued at RM 1,000,000. They estimate that their property losses have the following distribution:

Losses (RM)	Probability
1,000,000	0.001
500,000	0.010
250,000	0.050
10,000	0.100
0	0.839

- i. What is the expected value of Pintar Company's losses?
(7 marks)
- ii. If insurance for this loss were available for a price of RM10,000 per year, do you think that Pintar Company would want to buy it? Why or why not?
(2 marks)

- (b) Impian Sdn. Bhd has the following distribution for its annual medical costs:

Loss =	RM2,000,000	with probability 0.0001
	RM100,000	with probability 0.001
	RM5,000	with probability 0.1
	RM0	with probability 0.8989

- i. What are the expected claim costs for Impian Sdn. Bhd?
(4 marks)
- ii. If an insurer offered Impian Sdn. Bhd a policy with a RM5000 annual deductible, what are the expected claim costs on this policy?
(4 marks)
- iii. If an insurer offered Impian Sdn. Bhd a policy with a RM500,000 limit, what are the expected claim costs on this policy?
(4 marks)
- iv. Explain why these contractual provisions such as *limits* and *deductibles* are important from the insurance company's point of view.
(4 marks)

Continued...

Question 3 (25 Marks)

- (a) Lagenda Sdn. Bhd. plans to enhance its workers' safety by enrolling them for training courses. The company will enjoy rebates in premium by the insurance company if the workers completed the training course (assuming that the only benefits of the training is the insurance premium rebates). The firm has a total of 200 workers and the cost of the training course for each is RM800. If all of the workers enrol in the course immediately, the company will enjoy a rebate of RM55,000 in the company's insurance premium this year and rebate of RM38,000 in each of the subsequent 3 years. The cost of capital is 8%. Should you recommend Lagenda Sdn Bhd to proceed with the plan? Why?

(9 marks)

- (b) Jaguh Sdn. Bhd has a factory which manufacture industrial hand gloves. The probability of an explosion at the factory depends on how much the firm spends on safety as given by the table.

Expenditure (in RM millions)	Probability of Loss
0.0	0.030
0.5	0.020
1.0	0.016
1.5	0.013
2.0	0.011
2.5	0.010

- i. If an explosion occurs, the loss to society (e.g. damaged equipment, death of employees, etc) is expected to be at RM250 million. Find the optimal level of safety from a societal perspective.

(8 marks)

- ii. Suppose that Jaguh Sdn. Bhd. has to pay only 50% of the losses that occur. Ignore the time value of money, what is the maximum loss control expenditure that Jaguh Sdn. Bhd. should spend on safety?

(8 marks)

Continued...

Question 4 (25 Marks)

- (a) List the advantages and disadvantages of purchasing an insurance policy on aggregate property and liability losses versus purchasing a separate property insurance policy and a separate liability insurance policy.
(7 marks)
- (b) Risk retention refers to the decision to accept the uncertainty associated with a particular risk exposure. The development and selection of alternative risk management methods involve a fundamental trade-off between the benefits of retention and the increased costs from greater risk. List and discuss three (3) advantages of increased risk retention.
(9 marks)
- (c) Kasturi Bhd. has historically purchased separate policies for property insurance and liability insurance. Each of the policies had RM4 million retention. The company is now considering the purchase of a bundled policy which covers both property and liability exposures. The retention of the bundled policy is to be RM8 million. Sketch a graph illustrating the areas of unnecessary coverage that will exist if Kasturi Bhd. continues with separate policies.
(4 marks)
- (d) Consider two firms: Firm A has 2,000 workers in twenty different states. Firm B has 500 workers at a single plant. All else equal, which firm would be more likely to retain their workers compensation losses? Explain.
(5 marks)
